Aaron K Greenyer

Mobile: +44 7498 731 198   **Email:** akgreenyer@gmail.com   **Website:** akgre.github.io

A **solution focused** test automation engineer incorporating applied knowledge of electronic test equipment with **software frameworks** and **data analytics** to accelerate your testing capabilities.

Combine your expertise with **real visualisation** of product performance to confidently achieve your engineering and business goals. Practising open and transparent collaboration to implement requirements for the optimum solution from the point of view of **functionality** and **cost effectiveness**.

Focus Areas

Design & Support	Software Development	Data Analytics
Supporting you to define dynamic improvement of your test strategies for increasingly complex R&D requirements	Pragmatic development of a scalable modular design offers tailored support for your project development	See the value of your data throughout the product lifecycle by providing greater insight for effective decision making

Learn More:

Process Workflow	Test Automation Framework	Data Visualization

Employment

Contracting Engineer – Greenyer Electronics LTD   3/2017 – Current
Developing automated test applications for customer products

- Working with experts to accelerate progress and accomplish their project goals
- Develop a bespoke python framework to rapidly design and execute product test procedures

Learn More: Contract Experience

Technical Support Engineer – Keysight Technologies (AKA Agilent/HP)   6/2014 – 3/2017
Supporting customers selecting new instruments, application methods and fault diagnosis

- Trained in multiple disciplines to support customers on a wide range of test and measurement applications
- Liaising with multiple technical teams locally and around the world to form solutions to customer's inquiries
- Introducing software integration support to an industry that is evolving
- Develop applications to organise query threads and store backups for reference and training
- Managing and assisting with training of new staff

KEYSIGHT TECHNOLOGIES

Laboratory Manager – Pure (Wireless Music Systems Company)   12/2010 – 6/2014
Running an electronic laboratory, assisting design engineers and designing product test solutions

- Designing and developing RF test automation solutions
- Product system verification testing
- Hardware development, board modifications
- Lab management – organising and maintaining lab, maintaining lab equipment, computers and procurement of stock
- PCB design and manufacture

PURE

Robotics Process Automation

In some instances, automating repetitive manual tasks is not justifiable. The applications that are already in use can be complex and the amount of effort in recreating the functions for automation would not see a return on investment.

Robotic Process Automation (RPA) is used to develop rule-based processes that mimic the steps a human would take to perform the processes. The software uses the existing user interface, it can be quickly integrated and put into production in a short time, which means that RPA can quickly create value.

Computing And Technical Skills

- Experienced knowledge of Windows OS, Windows Office
- Data analysis with product testing
- Applied knowledge of Python to design and develop automated tests for product testing
- Object Oriented Programming (OOP) design
- Use of GIT version control system
- Accomplished SMD soldering skills and techniques with re-flow soldering
- Product thermal testing in climatic chambers
- RF testing in anechoic chambers
- Computer hardware (build and setup computers with dual boot Ubuntu/Windows)
- Use of data visualization tools (Tableau)

- Proficient knowledge of test and measurement equipment. DMMs, oscilloscopes, generators, analysers etc.
- Use of Prologix ethernet to GPIB adapters
- Working knowledge of VBA, VEE, LabVIEW
- Communication with DUT via SPI, I2C, RS232, JTAG, Ethernet and USB.
- Hardware Prototyping
- Parts stock and assent management
- Good working knowledge of Raspberry Pi and Arduino (use of C/C++)
- Experience with fault finding and bug reporting
- Understanding of electronic schematics

Education

Electronic and Electrical Engineering Foundation

		Brunel University, Uxbridge	09/2007 – 05/2008
Engineering Mathematics	B	Personal & Analytical Skills	B
Devices & Circuits	A	Workshop	A
Computers & Digital Systems	B	Business management	A

Richmond College, Twickenham   **09/2004 – 06/2007**

A-levels: Electronics, Physics, Chemistry and Mathematics
A/S levels: Music Technology

Elthorne Park High School, Hanwell   **09/1999 – 07/2004**

11 GCSEs including: English, Maths, Physics, Chemistry and Biology.

Investing & Outsourcing

As projects evolve, it may be necessary to expand the testing capabilities and invest or upgrade test systems. With inside knowledge of test and measurement manufacturers, I am able to coordinate with third party suppliers to provide technical support, prove equipment performance and present financial options for your solution.

I have worked closely with a **Data Scientist** who specialises in creating statistical programs which display optimized statistical efficiency and quality amongst thousands of tests. Further, I use these elegant visualizations for communicating insights to decision makers as well as storing and demonstrating the output across the history of a product's development.
